RADAR AVAILABLE : How and Where

GCA= GROUND CONTROLLED APPROACH - COMPRISED OF TWO UNITS - PAR and ASR.
PAR= PRECISION APPROACH RADAR. ASR= AIRPORT SURVEILLANCE RADAR.

GROUND CONTROLLED APPROACHES - The only airborne equipment required for ground controlled approaches is a functioning radio transmitter and receiver. There are two types of ground controlled approaches - Precision and Surveillance (PPI).

PRECISION APPROACHES-Aircraft are guided to final approach to the designated instrument runway. The final approach flight path on a precision scope (PAR) is greatly expanded for increased accuracy and furnishes the controller with range, azimuth and altitude information. This permits the controller to accurately guide aircraft to touchdown on the runway. However, the weather minimums listed below apply.

SURVEILLANCE or PPI APPROACHES - Only the ASR scope is used and aircraft may be directed to any selected runway over approximately the same flight path the pilot would take if flying VFR. This scope furnishes range and azimith information only. Since no altitude information is available to the controller, pilots must control their descent based on the glide angle desired, and the distance from the runway as furnished by the controller. Because ASR does not permit the same degree of accuracy as PAR the weather minimums for this type of approach must be equal to, or better than the regular (R) minimums as listed in Flight Information Manual for the airport.

CAA RADAR UNITS - Operate continuously at the locations listed. Available to all pilots, civil and military. Contact associated CAA control tower on any frequency guarded for initial instructions, or in an emergency any CAA facility for information on nearest Radar Control.

AIR FORCE AND NAVY GCA UNITS - Available to civil pilots in emergency or by prior arrangement with C.O. of respective facility.

Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call the nearest air traffic control facility (radio, airways, or tower, etc.) requesting GCA and further instructions.

Contact under VFR: VFR check-out of training flights should be arranged locally through Base Operations or the Control Tower.

Emergency: When receiver or transmitter difficulties exist, the tower may relay GCA approach instructions to the pilot, or the GCA operator may transmit, in blind, instructions for aircraft to make three hundred sixty (360) degree turns for identification. In either case, instructions will be followed at the pilot's discretion.

After being inoperative, GCA units require 20 to 30 minutes for warming up. Pilots should anticipate requirements for GCA in flight planning and request alerting of GCA units as far in advance as possible.

Civil minimums at military installations established by the CAA are 400' ceiling and 1 mile visibility except in emergency unless Air Force or Navy facility being used has higher minimums.

Navy units are prepared to transmit on HF from 2000 to 18,100 kc and receive any frequency from 1500 to 9050 kc to aid any plane in emergency.

Alt MSL=Min. alt. over airport.

(D) = Day. (N) = Night. → = New or revised data. ✓ = New facilities or name changes.

AIR NAVIGATION RADIO AIDS

INSAC = Interstate Airway Communications Station (CAA).

VHF OMNI-RANGES: "Non-commissioned" VHF omni-ranges may lack certain items, such as monitoring or control equipment or may not have been flight-checked and are subject to shut-down at any time without notice. The courses may or may not be within the prescribed tolerances and the station is to be used accordingly.
NOTE: See OMNIRANGE USE, page 79.

VAR AND VOR MONITORING CLASSIFICATION FOR AIR TRAFFIC CONTROL PURPOSES: Category I (VAR) = Following conditions must be met: (A) The visual course alignment and signal level are monitored continuously. (B) The aural "A" or "N" sector signal is monitored continuously by the communicator at the associated INSAC. (C) The station identification is monitored continusouly by the communicator at the associated INSAC. (D) The aural course alignment is monitored at least once each hour by the communicator at the associated INSAC. Category I (VOR) = Course alignment and signal level are monitored continuously. NOTE: Category I indicated by parenthetical (1). Category II (VAR only) = If all except (D) of the conditions of Category are met. NOTE: Category II indicated by parenthetical (2). Category III = Facility monitored solely through use of automatic visual course and signal level monitor with automatic transfer unit. This category may permit VOR to be inoperative for a limited period before a notice to airmen is issued. Normally, VHF ranges which are not controlled by an INSAC, and located too distant from INSAC to be monitored with a VHF receiver will fall into Category III. NOTE: Category III indicated by parenthetical (3).

LEGEND

(A) = Air Force facility. (N) = Navy facility. (P) = Private facility
(g) = Tower equipped with 121.9 or 121.7 mc transmitter for control of ground traffic. (7-19) = Hours of operation, i.e., 0700-1900
(U) = Unmonitored, but usable for navigation (3) = Monitoring category
(B) = Blue Hemisphere; (Y) = Yellow hemisphere
→ = New or revised data
✓ = New facilities or name changes, see page 20.
\+ = Additional data will be found in Notices to Airmen Section.

NOTE: Letters between range crs are quadrant identifiers, e.g., "90 YN 180" indicates the quadrant between the two crs is a yellow N quadrant. The letter immediately following a range crs indicates whether the course is aural or visual, i.e., "Y" or "B", for yellow or blue, indicates visual; "A" or "N", aural. In the case of low frequency ranges, the A or N cited between two courses is the identification to be heard in the quadrant between those two courses.

RADIO CLASS DESIGNATIONS

AC. . . Approach Control Tower, CAA (transmits on voice channel of associated L/MF range or ILS in addition to frequencies listed)
B. . . . Scheduled Broadcast Station (broadcasts weather at 15 & 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes)
C. . . . Control Tower, CAA
CA. . . Control Tower, Air Force
CI. . . Control Tower (City, County, Private, etc.)
CN. . . Control Tower, Navy
D. . . . Distantly controlled
FM. . . VHF fan marker (100 watts)
GCA. . Ground Controlled approach system
H. . . . Non-directional radio beacon (homing), power 50 watts to less than 2000 watts
HH. . . Non-directional radio beacon (homing), power 2000 watts or more
ILS. . . Instrument Landing System (voice on localizer channel)
J. . . . L/MF (200 - 415 kc) voice facility on other than range frequency
LFM. . VHF fan marker, low powered (5 watts)
LMM. . Compass locator station when combined with middle marker of ILS
LOM. . Compass locator when installed at outer marker site or within 5.5 miles of middle marker.
MH. . . Non-directional radio beacon (homing) power less than 50 watts
ML. . . Range (loop radiators), power less than 50 watts
MM. . . VHF middle marker
MOR. . Low frequency omni-directional range
MRA. . Range (adcock, vertical radiators), power 50 or more, but less than 150 watts
MRL. . Range (loop radiators), power 50 or more, but less than 150 watts.
OM. . . VHF outer marker
P. . . . Point-to-Point radio
RA. . . Range (adcock, vertical radiators), power 150 watts or more
RL. . . Range (loop radiators), power 150 watts or more
S. . . . Simultaneous (range signals and voice) type of transmitter
T. . . . Teletype
TX. . . Principal teletype
V. . . . Additional VHF voice feature on other then range frequency
VAR. . Visual-aural VHF range
VOR. . Omni VHF omni-directional range (omni-range)
VOT. . VHF omnitest facility radiates omnidirectionally a simulated VOR north course Identification: Continuous dots.
W. . . Without voice facilities
Z. . . VHF station location marker at a range station

FREQUENCY LEGEND

V = 140.58 and 111.1 mc transmitted.
# = Guards same VHF frequencies station transmits except 111.1 mc.
(1) = 3105,4495 kc guarded
(2) = 3105, 4495kc; 122.5 mc. This group of frequencies is group generally guarded by C.A.A. towers.
(3) = 3105,4495 kc; 122.1,126.7,140.58 mc. This group of frequencies is group generally guarded by INSACS.
e.g., (3)-140.58,122.1 = guards every frequency in group (3) except 140.58 and 122.1
(3),6210-140.58 = guards 6210 plus every frequency in group (3) except 140.58

NOTES

1. Range courses are magnetic in-bearings.
2. All C.A.A. MH facilities operate continuously unless cited as follows: (on req)
3. All C.A.A. ranges operate continuously. Those which are not manned continuously are cited in the class column with hours of operation in parentheses, e.g., (6-24)
4. When a VHF is controlled by an associated LF range, because of space limitation, DTV is not included in the VHF range class.

Pilots are requested to indicate when calling C.A.A. airway communications stations and control towers the frequency on which the reply is expected.

DIRECTORY OF AIRPORTS

LEGEND

CITY AND AIRPORT NAME

(AF) Airport name followed by city name in parenthesis (With AF in Type Column) - field owned or leased in whole by U.S. Air Force.

(AF) City and Airport Name (with C,I,M,MG or P in Type Column) - a civil airport with Air Force operations, reserve training, or other such acitvity thereon.

NOTE: Similar combinations of above two citations of A,N,CG, and NG indicate the same is applicable for Army, Navy, Coast Guard, and National Guard fields respectively.

(P) City and Airport Name - Civil Airport covered by an agreement between municipality and U.S. Government which permits use by transient military aircraft.

(PC) Same legal status as (P), but closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16.

* City, Site No., and Airway abbreviation - CAA intermediate field. Municipal airports with lights maintained by the CAA are listed similarly except there is no prefixed star.

NOTES:

1. MILITARY FIELDS ARE OPEN TO CIVIL AIRCRAFT ONLY BY PRIOR PERMISSION OF THE C.O. THEREOF. ALL AIRPORTS with C,I,M, or MG in type column are open to civil fliers.

2. USAF aircraft are permitted to use only those fields prefixed with an AF,A,N,NG,CG,P,PC or *

3. When city and airport names are identical, the airport name is omitted to conserve space.

TYPE

AF	-Air Force	CG	-Coast Guard	MG	-Misc. Govt
A	-Army	I	-Intermediate	N	-Navy
C	-Commercial	M	-Municipal	NG	-Nat'l Guard
				P	-Private

LOCATION

The word "miles" has been eliminated because of space limitations. Mileage is that from the center of city to airport.

If orientation features are less than 1/2 mile from the field, distance is not specified

ELEVATION

Obviously, the effective length of a runway decreases with elevation above sea level. The C.A.A. formula for elevation correction is that a sea level runway length requirement must be increased 7% per 1000 feet of elevation above sea level. High temperatures also play an important role in reducing the effective length of runways.

NUMBER OF RUNWAYS

No differentiation is made between runways and strips as far as number of landing areas in field is concerned

LONGEST RUNWAY FACILITIES

In this column are included the length and surfacing of the longest runway, the lighting and servicing facilities, and weather reports available.

RUNWAYS

The length of the longest paved runway or non-paved strip is stated in hundreds of feet. If the length is not prefixed, the surface is sod, clay, gravel, etc.

h - runway is paved (concrete, asphalt or similar type of paving)

aw - allway field

(26) - runway or strip length not verified by C.A.A.

LIGHTS

B: Rotating Light (Rotating beacon)
(Green and white, split-beam and other types)
Omission of B indicates rotating light is not available.

NOTE: Code lights are not codified, and are carried in Remarks Column.

L: Field Lighting

- L - by itself indicates temporary lighting, such as flares, smudge pots, lanterns.
- 1 - Portable lights (Electrical)
- 2 - Boundary
- 3 - Runway floods
- 4 - Runway or Strip
- 5 - Instrument approach (neon)
- 6 - High intensity runway
- 7 - High intensity instrument approach

* An asterisk preceding an element indicates that it operates on prior request only (by phone call, telegram or letter). Where the asterisk is not shown, the lights are in operation or available sunset to sunrise by request (circling the field or radio call).

Because the obstructions on virtually all lighted fields are obstruction lighted, obstruction lights have not been included in the codification.

SERVICING

S1: Storage
S2: Storage, minor aircraft repairs
S3: Storage, minor aircraft, and minor engine repairs
S4: Storage, major aircraft, and minor engine repairs
S5: Storage, major aircraft, and major engine repairs

NOTE: Any S combination without parenthesis indicates only full-time day attendant. Fields having lighting facilities may have 24 hours attendant available.
Any S combination in parenthesis-part time or irregular attendant.

WEATHER

W: Weather reports available from Weather Bureau or C.A.A. communications station on field.

FUEL OCTANE

Civil Fuel:

F1:	80 oct., at least	F3:	91 oct., and lower
F2:	87 oct., and lower	F4:	100 oct., and lower

NOTE: If only one octane available, this octane cited, and not coded.
Any F combination without parenthesis indicates full time day attendant, in parenthesis part-time or irregular.

FUEL OCTANE (cont)

Air Force and Navy Fuel:

A+:	115/145 oct.	C :	73/80 oct.
A :	100/130 oct.	J :	JP - 1
B :	91/98 oct.	J3:	J-3

REMARKS

(a) "INACTIVE" indicates usable civil field, but not being operated, at last inspection. Caution advised.

(b) "CLOSED" indicates closed to all traffic except in emergency.

(c) "OFL BUS ONLY" indicates closed to all transient military aircraft except on official business or in emergency. U.S. Aircraft require written orders. "AF OFL BUS ONLY" or "NAVY OFL BUS ONLY" indicates applicability of restriction only to Service indicated.

(c) "INACT - NO FACS" indicates AF airfields used exclusively by the USAF or municipal fields used jointly by the USAF and civil interest at which both USAF and civil interest are inactive; these will be available to military aircraft at the discretion of the Commanding Officer of the organization to which aircraft are assigned.

(e) "CIVIL FACS ONLY" indicates municipal fields under joint control or ownership of the USAF and/or Navy and civil interests at which no USAF or Navy facilities are available. Such fields may be used by military aircraft; however, only commercial service is available.

(f) "LIMITED USE" indicates some special restriction on use of field which will be listed in Notices to Airmen section of Airman's Guide.

(g) "ABANDONED" indicates reverted to non-airport usage such as farming or grazing.

(h) "REPORTED ABANDONED" indicates an airport reported abandoned but not verified as such by C.A.A.

(i) "FEE" indicates landing charges for private or non-revenue producing aircraft. In addition, fees may be charged for planes that remain over a couple of hours and buy no services, or at major airline terminals for all aircraft.

(j) "+" indicates additional data in Notices to Airman Section.

(k) "Blkd" indicates approaches where glide angle to runway is 3:1 or less.

(l) "Rgt tfc N" indicates right turns should be made on landings and take-offs to N.

(m) "A,B" indicates Air Force or Navy fuel. See Fuel Octane column.

NOTES

1. → New or revised data.
2. SCHEDULED AIRLINE STOP airport names are capitalized.
3. PRIVATE AIRPORTS: Usually unattended, offer no public service and solicit no public patronage. Such fields are listed primarily because of their possible utility as emergency landing areas. Use of these fields is at the risk of the user. No "S" or "F" combination is ever assigned these fields.
4. OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, for example, clearly discernible for contact operations, are frequently omitted. On the other hand, all pole lines within at least 15:1 glide angle are indicated.
5. NEW AIRPORTS: At the end of each state, under this heading will be found, out of alphabetical alignment, all the new airports tabulated after the type for that state had been originally set up.

NOTICES TO AIRMEN

SPECIAL NOTICES

NAVY SPECIAL NOTICES

NAVY DATA: In accordance with Hydrographic Office Memorandum for Aviators, No. 17, September 17, 1948, before any changes or modifications of any aid to air navigation, such as realignment of radio ranges, modified instrument approach procedures, relocation of fan markers, etc., can be published by the Hydrographic Office, the Command requesting the change must first obtain approval from the Office of Chief of Naval Operations, Navy Department, Washington 25, D. C. When an approved change or modification has been made to any aid to air navigation, the Command shall immediately notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C.

All Naval Air Stations and Air Facilities are directed to notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C., direct, of all contemplated or immediate changes in their field facilities, operation rules, air-ground communication facilities, GCA, etc., and other factors affecting safe operation of aircraft which do not necessitate approval from CNO. This may be done by letter, speedletter, or dispatch, as applicable.

In accordance with Chief of Naval Operations Aviation Circular Letter 19-49 March 2, 1949, approval for the closing of any Navy or Marine Corps Air Station or Air Facility to transient military aircraft for a period in excess of ten days must be obtained from the Chief of Naval Operations.

. . Commanding Officers of Naval and Marine Corps aviation activities are directed to review all information published by the Hydrographic Office, U. S. Air Force, Civil Aeronautics Administration, and Coast and Geodetic Survey on facilities under their command and immediately forward any corrections or approved amendments direct to the publishing agency. A copy of the corrections or amendments to information published by other agencies should be forwarded to the Hydrographic Office. The charts and publications issued by the above-mentioned agencies must be currently maintained in order that all aviators can be kept informed of changes to airfields, seaplane anchorages, navigational aids, and other factors affecting the safe operation of aircraft.

AIR FORCE SPECIAL NOTICES

AIR FORCE DATA: Advice covering Air Force fields or Air Force operations on civil fields, or Air Force radio facilities, and also Air National Guard fields and facilities should be forwarded to: Commanding Officer, Aeronautical Chart & Information Service, Washington 25, D. C.; Attn: Aeronautical Information Division.

Requests for approval of the closing of Air Force airfields or restrictions in airfield facilities to transient military aircraft for over ten days should be forwarded through channels to Headquarters, U. S. Air Force. Restrictions in Air National Guard fields or facilities will be forwarded to the National Guard Bureau through the State Adjutant General for approval. Information to be published will be coordinated and submitted to the Civil Aeronautics Administration by Headquarters MATS.

In connection with the above, the attention of all base operations officers is invited to A. F. Regulation 55-12 of July 1, 1949, subject, "Notices to Airmen", A. F. Regulation 5-16 of February 20, 1948, subject, "Responsibilities for Flight Publications", and to A. F. Regulation 60-23 of September 23, 1947, subject, "Restrictions on Landing at Army Airfields".

AIR FORCE OFFICIAL BUSINESS: Air Force official business within the meaning of Air Force Regulation 85-2 is interpreted as the necessity for personnel aboard an aircraft to contact personnel, units, or organizations at or near the airfield selected for landing for the purpose of conducting transactions in the service of, and in the interest of, the United States Government. This does not include the use of an airfield by transient aircraft for the purpose of obtaining clearance, service, or other items attendant to itinerant operations. Cross country flights for the purpose of maintaining flying proficiency are not considered to be official business within the meaning of this regulation.

*Headquarters, USAF has directed following utilization only for communications as listed with a view to eliminating congestion: Channel A: IFR flight and such other traffic as required by CAA; Channel B: Immediate aircraft movements within control zone of airport; Channel C: Routine IFR and VFR flights and "company business".

**This frequency plan is effective upon completion of modification AN/ARC-1 guard channel in accordance with BuAer Technical Order to permit tuning to 121.5 mc. Prior to completion of this modification, 140.58 mc for CAA Airways will be carried in guard channel of AN/ARC-1 equipment, and 121.5 mc in Channel 1.

***In 4 channel equipment (ARC-5 and SCR-522) 126.18 mc or 142.02 mc may be substituted on Channel C and D in accordance with operational requirements.

UTILIZATION OF CAA VAR STATIONS BY MILITARY AIRCRAFT: The attention of pilots is directed to the fact that voice facilities are available at many VAR stations (see pages 90 thru 103, A.N. 08-15-1), and CAA communications stations are located thereat. Such VAR facilities should be utilized for navigational aid and communications services, particularly when standard low frequency facilities are not available.

AIR FORCE FOREIGN CLEARING STATIONS: Under the authority of Air Force Regulation 60-8 of July 6, 1949, U. S. Air Force aircraft with destinations listed below or returning therefrom to the United States will clear through the stations indicated:

AFRICA and AZORES: Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D. C.; or Westover AFB, Mass.

ALASKA: McChord AFB, Wash.; Great Falls AFB, Mont.; or Travis AFB, Calif.

BERMUDA: Mitchel AFB, N. Y.; Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D. C.; Travis AFB, Calif.; or Westover AFB, Mass.

CANADA: Great Falls AFB, Mont.; Brookley AFB, Ala.; McChord AFB, Wash.; Washington National Airport, D. C.; Selfridge AFB, Mich.; Westover AFB, Mass.; or Mitchel AFB, N. Y.

CANAL ZONE and MEXICO: March AFB, Calif.

CANAL ZONE, CENTRAL AMERICA, MEXICO, AND SOUTH AMERICA: MacDill AFB, Fla.; Kelly AFB, Texas; Brookley AFB, Ala.; Washington National Airport, D. C.

CARIBBEAN: Brookley AFB, Ala.; Kelly AFB, Texas; MacDill AFB, Fla.; Washington National Airport, D. C.

ENGLAND, GREENLAND, ICELAND, AND NORTH IRELAND: Washington National Airport, D. C.; or Westover AFB, Mass.

EUROPEAN THEATER: Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D. C.; Westover AFB, Mass.; or Kelly AFB, Texas.

HAWAII: Travis AFB, California.

NOVA SCOTIA and NEWFOUNDLAND: Washington National Airport, D. C.; Westover AFB, Mass.; Selfridge AFB, Mich.; Brookley AFB, Ala.; or Mitchel AFB, New York.

The classified "Foreign Clearance Information Guide", published by Aeronautical Chart and Information Service and now distributed to all Air Force bases should be consulted prior to departure for foreign clearing station, particularly with regard to diplomatic requirements for country for which clearance is desired, in order that appropriate advance notice of flight may be given and delay at foreign station may be avoided.

CURRENT FEDERAL AIRWAYS MANUALS OF OPERATION: The following publications are now distributed in accordance with AF Regulation 5-12, and supersede listing given in paragraph 5 of this regulation. Base operations officers, weather and communication units should check copies in use to insure that latest issues and all revisions are available. Mailing lists are now maintained in accordance with groupings of material as follows:

GROUP I MATERIAL: II-B. Instructions for the Operation of Communications Facilities, First Edition, January 15, 1950 (This replaces II-B-2, II-B-3, II-B-5, II-B-7, II-B-8 and II-B-11); M-59, November 5, 1949 (Service "B").

GROUP II MATERIAL: Location Identifiers, Fourth Edition, July 1, 1950, with two revisions.

GROUP III MATERIAL: Contractions, Fourth Edition, December 1, 1949.

GROUP IV MATERIAL: Civil Airways Mileage Chart of June 14, 1950.

GROUP V MATERIAL: Teletype Service "A" Manual, September 19, 1950; Teletype Service "C" Manual, January 9, 1951; Teletype Maps: M-11 December 1, 1949, and M-14, April 15, 1950 (Service "A"); M-10, October 1, 1949, and M-13, November 1, 1950 (Service "C"); M-58, August 15, 1950 (Service "A", "C", and "O").

GROUP VI MATERIAL: Teletype Service "O" Manual, May 1, 1950, with 6 revisions; Teletype Maps M-89, February 1, 1950 (Service "O") and M-58 (Service "A", "C" and "O").

Requests for distribution should be directed to Commanding Officer, Aeronautical Chart and Information Service, Washington 25, D. C. Attn: Aeronautical Information Division.

NEW USAF POLICY REGARDING USE OF INACTIVE FIELDS: In accordance with directive from Headquarters, USAF, Air Force fields which are on inactive status and are listed in the Directory as "INACT-NO FACS" will in the future be closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16, unless on official business with written orders.

COMPULSORY REPORTING POINTS - VAR RANGE FACILITIES: VAR Facilities designated by CAA and shown on radio facility charts as Compulsory Reporting Points will be applicable to USAF aircraft only [illegible] aircraft is equipped with the necessary instruments and radio frequencies and [illegible]t plan has been filed with ATC declaring the intention to utilize these facilities. When ATC clearances include instructions using these facilities and the aircraft is not equipped for such use, the pilot should so advise the traffic control agency and request amended traffic control instructions.

PROVISION OF PLAIN LANGUAGE TERMINAL FORECASTS: All CAA communications facilities now provide Air Force pilots with terminal forecasts in plain language upon request. Terminal forecast information for all Air Force bases and for Patuxent River Naval Air Station, Maryland, will be available. Pilots should make full use of this service in requesting weather information.

SPECIAL CHARTS OF ATOMIC ENERGY AIRSPACE RESERVATIONS: The Atomic Energy Commission has issued a special chart depicting airspace reservations in the United States. Copies of this chart are being supplied each Air Force Base, AF Reserve Unit, National Guard Unit and other activities on the same mailing list basis as used for Airman's Guide. Operations officers should prominently display this chart and assure that pilots contemplating flight adjacent to these areas are briefed upon their existence, location and restricted status.

IMPLEMENTATION OF 135.90 MC AS CAA AIRWAYS FREQUENCY: Discontinuance of 140.58 mc as CAA airways station frequency and implementation of 135.90 or 135.9/135 originally scheduled for March 1, 1951, has been postponed to 1700Z April 1. In order to improve communications on Channel A, simplex operation on USAF aircraft will be changed to single channel duplex operation for that channel at that time; a receiving crystal on 135 mc and a transmitting crystal on 135.90 mc will be installed in Channel A to replace 140.58 mc. Navy aircraft will continue to operate on a simplex basis and the frequency of 135.90 mc will replace 140.58 mc in Navy Channels 1 and D. Coast Guard aircraft will on April 1 use 135.90 mc simplex in lieu of 140.58 mc but will in the near future convert equipment so as to transmit on 135.90 mc and receive on 135 mc. CAA airways stations will transmit on frequency of 135 mc and receive on 135.90 mc for USAF aircraft; in the case of Navy aircraft will transmit and receive on 135.90 mc; and for Coast Guard aircraft as required by current method of operation.

NEW IFR POSITION REPORT PROCEDURE FOR MILITARY AIRCRAFT FLYING ABOVE 17,200 FT: Effective March 15, 1951, the normal requirement for position reports under IFR at each designated compulsory reporting point will not apply to aircraft flying above 17,200 feet. All aircraft flying above 17,200 ft will designate established reporting points or other check points describing the route of flight in the flight plan on the basis of one (1) reporting point each 200 miles. IFR position reqports will only be required at these previously designated points and if necessary at any additional points requested by ARTC. Jet pilots should take full advantage of this position reporting procedure.

CIVIL SPECIAL NOTICES

CIVIL DATA: The airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or a runway partially unusable because of construction.

Obviously, temporary hazardous conditions should be reported to the aeronautical public at once. The necessity for reporting additional aids or minor changes in existing aids, however, isn't nearly as cogent. In other words, a temporarily closed airport is ordinarily of much more importance from a safety viewpoint than is a new airport, and the aeronautical public should be told about it as expeditiously as possible.

Notamizing of advice covering a field unusable because of flood or snow, a runway closed because of construction, or the erection of a pole-line in an approach, doesn't necessitate an engineering background on the part of the reporter. Too, safety frequently necessitates the notamizing of such advice before an official check can be made. On the other hand, advice covering permanent airport data changes, such as a new airport, or a lengthened landing strip, or an additional hangar, obviously doesn't require the same expeditious transmission to the aeronautical public, and the data may be checked from an engineering standpoint and for standardization before being publicized.

SUMMATION: (a) Since the aeronautical public should be immediately advised of hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible, the items should be reported directly to the Office of Aviation Development, Attention: W-155., C.A.A., Washington 25, D. C.)

(b) Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate CAA District Airport Engineer for coordination before they are included in the Notices to Airmen Section.

FLIGHTS INTO CANADA: No photographic equipment may be installed in, nor may any photographs be taken from any U. S. aircraft operating in or over Canadian territory.

OMNIRANGE USE: The effectiveness of the omnirange (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries.

CIVIL USAGE OF MILITARY FIELDS: U. S. Air Force and Navy fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

DIRECTORY OF AIRPORTS AND AIR NAVIGATION RADIO AIDS NOTAMS: Because of space limitations, the Airport Directory and Air Navigation Radio Aids perforce serve as a notam supplement. Notam data revising a previous Directory or ANRA are indicated by prefixed arrows. The only airport or radio data (other than temporary conditions of short duration) carried in the Notices to Airmen Section are facility coordinates, post-deadline data, or data impossible to incorporate in the two above tabulations.

FLYING OVER FOREIGN TERRITORY: All aircraft operators are urgently cautioned that no over-flights of foreign territory should be made without authorization from the foreign government concerned, and then only in accordance with authorized procedures.

Safety of crews, apssengers and aircraft require that every precaution be taken to follow such procedures, particularly with Iron Curtain countries.

√INSTRUCTIONS FOR MONITORING ILS: Communications should be established with the appropriate control tower or with the communications stations where there is no control tower prior to starting an ILS approach. This is in order to receive advisory information as to the operation of the facility. It is also recommended that the aural signal of the ILS be monitored during an approach to assure continued reception and receipt of advisory information.

√DIRECT COMMUNICATIONS WITH AIR ROUTE TRAFFIC CONTROL CENTERS: The CAA has inaugurated a procedure whereby pilots operating on IFR flight plans may have direct communication with air route traffic controllers at certain control centers. VHF on a simplex basis (call-up and reply on the same frequency) is used. This enables the controller to issue traffic clearances and receive indications of compliance therewith in such a manner that all air traffic is expedited. The center will guard the assigned frequency. However, each specific aircraft, with which the center desires to establish direct communication for control purposes, will receive a clearance through the appropriate CAA, AACS or Air Carrier Communications Station, indicating the time or place the controller desires to communicate directly with the pilot.

The following locations at which this direct communications procedure is available are also listed in the Air Navigation Radio Aids Section of the Airman's Guide. Each one is listed alphabetically following the tower listing. When additional locations establish this procedure they will be similarly listed.

VHF OMNITEST SIGNAL FACILITIES: Experimental VHF omnitest signal facilities have been installed at the New York (LaGuardia 112.0 mc), Chicago (Midway 112.0 mc), and Kansas City (Municipal 113.0 mc) airports. These facilities permit checking of aircraft navigational VOR receivers during a ramp test or while in flight near the airport. The facility radiates a 0° course in all directions with a power output of about 10 watts. The identification consists of continuous dots without voice. Each facility is continuously monitored and will shut down automatically if the 0° course varies by more than one degree from normal or in case the identification fails. Flight checks indicate that the omnitest signal is usable to a distance of about ten miles at minimum instrument altitude although regions of weak and unreliable signal may be encountered at shorter distances. The omnitest signal may be regarded as dependable when there is no flag alarm showing or where no flag alarm is incorporated in the aircraft unit and the identification is received free from interference and noise. Comment from airmen will be appreciated. Please forward same to: Civil Aeronautics Administration, Washington 25, D. C., Attention: W-380.

RECEIVER OMNITEST PROCEDURE - Receivers with Omni-Bearing Selectors (OBS)

Tune in omnitest frequency. The "To-From" indicator should read "To" or "From" and the alarm flag, if one is used, should disappear.

Set OBS in vicinity of 0° to center "Deviation" indicator. The "To-From" indicator should read "From" and the difference between 0° and the actual OBS reading indicates the amount of calibration error in the airborne equipment.

Set OBS in vicinity of 180° to again center "Deviation" indicator. The "To-From" indicator should read "To" and the difference between 180° and the actual OBS reading indicates the amount of calibration error in the airborne equipment.

With the "Deviation" indicator centered in the 180° position rotate OBS clockwise until "Deviation" indicator reads full scale or five dots to left. Note OBS reading. Next rotate OBS counterclockwise until "Deviation" indicator reads full scale or five dots to right. Note OBS reading. The difference between the two OBS readings is a measure of receiver course sensitivity.

If instrumentation includes a radio magnetic indicator (RMI) the pointer on this instrument connected to the receiver being checked should be observed. This pointer should indicate 180° ± 1 degree regardless of the setting of the OBS.

Automatic Indicating Receivers: Automatic indicating receivers do not have an Omni-Bearing Selector or a "To-From" indicator and have no ambiguity. The only course

that can be checked is 0° which is automatically indicated when the receiver is turned on and tuned to the correct frequency.

✓ON-REQUEST REPORTING POINTS: Effective immediately the following on-request reporting points are established:

(1) WOLCOTTSVILLE INTSXN - intsxn of the NE crs of Buffalo, N. Y. rng and the SE crs of the Toronto, Can. rng.

(2) EAST PEMBROKE INTSXN - intsxn of the E crs of the Buffalo, N. Y. rng and the SE crs of the Toronto, Can. rng.

(3) PILOT POINT - the intsxn of the N crs of Dallas, Texas rng and the SW crs of Perrin Texas AFB rng.

✓NON-STANDARD HOLDING PATTERN: Effective immediately the following non-standard holding pattern is established: Holding point - Simi intsxn (NW crs Burbank, Calif. rng and SW crs Newhall, Calif. rng); Direction from holding point - SW; Direction of turn - LEFT on N side of the SW crs of Newhall rng, Time - 2 minutes.

Effective immediately the Minneapolis-St. Paul International Arpt. ILS LOM non-standard holding pattern is cancelled.

✓INSTRUMENT APPROACH PROCEDURES: The standard instrument approach procedures for the following airports served by very high frequency ranges have been CANCELLED: Goodland, Kansas, Goodland Arpt., effective Feb. 13, 1951. Pine Bluff, Ark., Grider Fld., effective Feb. 7, 1951.

✓DANGER AREA DESIGNATIONS: The following Danger Area amendment shall become effective as dated, unless otherwise advised:

AMENDMENT 67 (April 6, 1951)

(1) The Sahuarita, Arizona, area, published on April 21, 1949, in 14 F. R. 1913, is amended by changing the "Description by Geographical Coordinates" column to read: "N boundary: lat. 31°59'30"N; E boundary: long. 110°51'00"W; S boundary: lat. 31°54'00"N; W boundary: long. 110°57'00"W".

(2) The Miami, Florida area, published on April 21, 1949, in 14 F. R. 1913, and amended on June 23, 1949, in 14 F. R. 3393, is further amended by changing the "Description by Geographical Coordinates" column to read: "Beginning at lat. 26°15'00"N, long. 80°16'30" W; SSW to lat. 26°00'00"N, long. 80°18'05"W; W to the edge of Blue Civil Airway No. 19 at long. 80°23'30"W; NNW along the E edge of Blue Civil Airway No. 19 to lat. 26°15'00"N, long. 80°25'45"W; E to lat. 26°15'00"N, long. 80°16'30"W, point of beginning."

(3) The Tonopah, Nevada, area, published on April 21, 1949, in 14 F. R. 1913, and amended on June 23, 1949, in 14 F. R. 3393, is further amended by changing the "Description by Geographical Coordinates" column to read: "Beginning at lat. 37°53'00"N, long. 116°11' 00"W; S to lat. 37°42'00"N; E to long. 115°53'00"W; S to lat. 37°33'00"N; E to long. 115° 48' 00"W; S to lat. 37°17'00"N; E to long. 115°18'00"W; S to lat. 36°41'00"N; W to long. 115° 35'30"W; S to lat. 36°35'00"N; W to long. 115°42'00"W; N to lat. 36°41'00"N; W to long. 115°56'00"W; N to lat. 37°16'00"N; W to long. 116°13'00"W; S to lat. 36°41'00"N; W to long. 116°26'30"W; N to lat. 36°51'00"N; W to long. 116°33'30"W; N to lat. 37°33'00"N; W to long. 117°02'00"W; northerly to lat. 37°53'00"N, long. 117°01'00"W; E to lat. 37°53'00"N, long. 116°11'00"W, point of beginning".

(4) The Fort Sill and Lawton, Oklahoma, areas published on April 21, 1949, in 14 F. R. 1913, have been combined into one area and revised to read: Location: Fort Sill (Oklahoma City Chart); Description: Beginning at lat. 34°47'00"N, long. 98°17'00"W; S to lat. 34°38'00" N; W to long. 98°36'00"W; N to lat. 34°39'00"N; W to long. 98°46'00"W; N to lat 34°47'00"N; E to long. 98°39'00"W; S to lat. 34°44'00"N; E to long. 98°36'00"W; S to lat. 34°43'00"N; E to long. 98°22'00"W; NE to lat 34°44'00"N, long. 98°21'00"W; N to lat. 34°47'00"N; E to lat. 34°47'00"N, long. 98°17'00"W, point of beginning; Altitudes: Surface to 45,000 feet; Time: Continuous; Using Agency: Fort Sill Artillery School, Fort Sill, Oklahoma.

NOTE: See page 93 for AMENDMENT 68.

AIR NAVIGATION RADIO AIDS

INSAC = Interstate Airway Communications Station (CAA).

VHF OMNI-RANGES: "Non-commissioned" VHF omni-ranges may lack certain items, such as monitoring or control equipment or may not have been flight-checked and are subject to shut-down at any time without notice. The courses may or may not be within the prescribed tolerances and the station is to be used accordingly.
NOTE: See OMNIRANGE USE, page 79.

VAR AND VOR MONITORING CLASSIFICATION FOR AIR TRAFFIC CONTROL PURPOSES: Category I (VAR) = Following conditions must be met: (A) The visual course alignment and signal level are monitored continuously. (B) The aural "A" or "N" sector signal is monitored continuously by the communicator at the associated INSAC. (C) The station identification is monitored continusouly by the communicator at the associated INSAC. (D) The aural course alignment is monitored at least once each hour by the communicator at the associated INSAC. Category I (VOR) = Course alignment and signal level are monitored continuously. NOTE: Category I indicated by parenthetical (1). Category II (VAR only) = If all except (D) of the conditions of Category are met. NOTE: Category II indicated by parenthetical (2). Category III = Facility monitored solely through use of automatic visual course and signal level monitor with automatic transfer unit. This category may permit VOR to be inoperative for a limited period before a notice to airmen is issued. Normally, VHF ranges which are not controlled by an INSAC, and located too distant from INSAC to be monitored with a VHF receiver will fall into Category III. NOTE: Category III indicated by parenthetical (3).

LEGEND

(A) = Air Force facility. (N) = Navy facility. (P) = Private facility
(g) = Tower equipped with 121.9 or 121.7 mc transmitter for control of ground traffic. (7-19) = Hours of operation, i.e., 0700-1900
(U) = Unmonitored, but usable for navigation (3) = Monitoring category
(B) = Blue Hemisphere; (Y) = Yellow hemisphere
→ = New or revised data
✓ = New facilities or name changes, see page 20
\+ = Additional data will be found in Notices to Airmen Section

NOTE: Letters between range crs are quadrant identifiers, e.g., "90 YN 180" indicates the quadrant between the two crs is a yellow N quadrant. The letter immediately following a range crs indicates whether the course is aural or visual, i.e., "Y" or "B", for yellow or blue, indicates visual: "A" or "N", arual. In the case of low frequency ranges, the A or N cited between two courses is the identification to be heard in the quadrant between those two courses.

RADIO CLASS DESIGNATIONS

AC. . . Approach Control Tower, CAA (transmits on voice channel of associated L/MF range or ILS in addition to frequencies listed)
B. . . . Scheduled Broadcast Station (broadcasts weather at 15 & 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes)
C. . . . Control Tower, CAA
CA. . . Control Tower, Air Force
CI. . . Control Tower (City, County, Private, etc.)
CN. . . Control Tower, Navy
D. . . . Distantly controlled
FM. . . VHF fan marker (100 watts)
GCA. . Ground Controlled approach system
H. . . . Non-directional radio beacon (homing), power 50 watts to less than 2000 watts
HH. . . Non-directional radio beacon (homing), power 2000 watts or more
ILS. . . Instrument Landing System (voice on localizer channel)
J. . . . L/MF (200 - 415 kc) voice facility on other than range frequency
LFM. . VHF fan marker, low powered (5 watts)
LMM. . Compass locator station when combined with middle marker of ILS
LOM. . Compass locator when installed at outer marker site or within 5.5 miles of middle marker
MH. . Non-directional radio beacon (homing) power less than 50 watts
ML. . Range (loop radiators), power less than 50 watts
MM. . VHF middle marker
MOR. . Low frequency omni-directional range
MRA. . Range (adcock, vertical radiators), power 50 or more, but less than 150 watts
MRL. . Range (loop radiators), power 50 or more, but less than 150 watts
OM. . . VHF outer marker
P. . . . Point-to-Point radio
RA. . . Range (adcock, vertical radiators), power 150 watts or more
RL. . . Range (loop radiators), power 150 watts or more
S. . . . Simultaneous (range signals and voice) type of transmitter
T. . . . Teletype
TX. . . Principal teletype
V. . . . Additional VHF voice feature on other then range frequency
VAR. . Visual-aural VHF range
VOR. . Omni VHF omni-directional range (omni-range)
W . . Without voice facilities
Z. . . . VHF station location marker at a range station.

FREQUENCY LEGEND

V = 135.9,135.0 and 111.1 mc transmitted.
# = Guards same VHF frequencies station transmits except 111.1 mc and 135.0 mc.
(1) = 3105,4495 kc guarded
(2) = 3105, 4495kc; 122.5 mc. This group of frequencies is group generally guarded by C.A.A. towers.
(3) = 3105,4495 kc; 122.1,126.7, 135.9 mc. This group of frequencies is group generally guarded by INSACS.
e.g., (3)-135.9, 122.1 = guards every frequency in group (3) except 135.9 and 122.1

NOTES

1. Range courses are magnetic in-bearings.
2. All C.A.A. MH facilities operate continuously unless cited as follows: (on req)
3. All C.A.A. ranges operate continuously. Those which are not manned continuously are cited in the class column with hours of operation in parentheses, e.g., (6-24)
4. When a VHF is controlled by an associated LF range, because of space limitation, DTV is not included in the VHF range class.

Pilots are requested to indicate when calling C.A.A. airway communications stations and control towers the frequency on which the reply is expected.

RADAR AVAILABLE : How and Where

GCA= GROUND CONTROLLED APPROACH - COMPRISED OF TWO UNITS - PAR and ASR.
PAR= PRECISION APPROACH RADAR. ASR= AIRPORT SURVEILLANCE RADAR.

GROUND CONTROLLED APPROACHES - The only airborne equipment required for ground controlled approaches is a functioning radio transmitter and receiver. There are two types of ground controlled approaches - Precision and Surveillance (PPI).

PRECISION APPROACHES-Aircraft are guided to final approach to the designated instrument runway. The final approach flight path on a precision scope (PAR) is greatly expanded for increased accuracy and furnishes the controller with range, azimuth and altitude information. This permits the controller to accurately guide aircraft to touchdown on the runway. However, the weather minimums listed below apply.

SURVEILLANCE or PPI APPROACHES - Only the ASR scope is used and aircraft may be directed to any selected runway over approximately the same flight path the pilot would take if flying VFR. This scope furnishes range and azimuth information only. Since no altitude information is available to the controller, pilots must control their descent based on the glide angle desired, and the distance from the runway as furnished by the controller. Because ASR does not permit the same degree of accuracy as PAR the weather minimums for this type of approach must be equal to, or better than the regular (R) minimums as listed in Flight Information Manual for the airport.

CAA RADAR UNITS - Operate continuously at the locations listed. Available to all pilots, civil and military. Contact associated CAA control tower on any frequency guarded for initial instructions, or in an emergency any CAA facility for information on nearest Radar Control.

AIR FORCE AND NAVY GCA UNITS - Available to civil pilots in emergency or by prior arrangement with C.O. of respective facility.

Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call the nearest air traffic control facility (radio, airways, or tower, etc.) requesting GCA and further instructions.

Contact under VFR: VFR check-out of training flights should be arranged locally through Base Operations or the Control Tower.

Emergency: When receiver or transmitter difficulties exist, the tower may relay GCA approach instructions to the pilot, or the GCA operator may transmit, in blind, instructions for aircraft to make three hundred sixty (360) degree turns for identification. In either case, instructions will be followed at the pilot's discretion.

After being inoperative, GCA units require 20 to 30 minutes for warming up. Pilots should anticipate requirements for GCA in flight planning and request alerting of GCA units as far in advance as possible.

Civil minimums at military installations established by the CAA are 400' ceiling and 1 mile visibility except in emergency unless Air Force or Navy facility being used has higher minimums.

Navy units are prepared to transmit on HF from 2000 to 18,100 kc and receive any frequency from 1500 to 9050 kc to aid any plane in emergency.
Alt MSL=Min. alt. over airport.
(D) = Day. (N) = Night. → = New or revised data. ✓ = New facilities or name changes.

DIRECTORY OF AIRPORTS

LEGEND

CITY AND AIRPORT NAME

(AF) Airport name followed by city name in parenthesis (With AF in Type Column) - field owned or leased in whole by U.S. Air Force.

(AF) City and Airport Name (with C,I,M,MG or P in Type Column) - a civil airport with Air Force operations, reserve training, or other such acitvity thereon.

NOTE: Similar combinations of above two citations of A,N,CG, and NG indicate the same is applicable for Army, Navy, Coast Guard, and National Guard fields respectively.

(P) City and Airport Name - Civil Airport covered by an agreement between municipality and U.S. Government which permits use by transient military aircraft.

(PC) Same legal status as (P), but closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16.

* City, Site No., and Airway abbreviation - CAA intermediate field. Municipal airports with lights maintained by the CAA are listed similarly except there is no prefixed star.

NOTES:

1. MILITARY FIELDS ARE OPEN TO CIVIL AIRCRAFT ONLY BY PRIOR PERMISSION OF THE C.O. THEREOF. ALL AIRPORTS with C,I,M, or MG in type column are open to civil fliers.

2. USAF aircraft are permitted to use only those fields prefixed with an AF,A,N,NG,CG,P,PC or *.

3. When city and airport names are identical, the airport name is omitted to conserve space.

TYPE

AF	-Air Force	CG	-Coast Guard	MG	-Misc. Govt
A	-Army	I	-Intermediate	N	-Navy
C	-Commercial	M	-Municipal	NG	-Nat'l Guard
				P	-Private

LOCATION

The word "miles" has been eliminated because of space limitations. Mileage is that from the center of city to airport.

If orientation features are less than 1/2 mile from the field, distance is not specified

ELEVATION

Obviously, the effective length of a runway decreases with elevation above sea level. The C.A.A. formula for elevation correction is that a sea level runway length requirement must be increased 7% per 1000 feet of elevation above sea level. High temperatures also play an important role in reducing the effective length of runways.

NUMBER OF RUNWAYS

No differentiation is made between runways and strips as far as number of landing areas in field is concerned.

LONGEST RUNWAY

FACILITIES

In this column are included the length and surfacing of the longest runway, the lighting and servicing facilities, and weather reports available.

RUNWAYS

The length of the longest paved runway or non-paved strip is stated in hundreds of feet. If the length is not prefixed, the surface is sod, clay, gravel, etc.

h - runway is paved (concrete, asphalt or similar type of paving)

aw - allway field

(26) - runway or strip length not verified by C.A.A.

LIGHTS

B: Rotating Light (Rotating beacon)
(Green and white, split-beam and other types)
Omission of B indicates rotating light is not available.

NOTE: Code lights are not codified, and are carried in Remarks Column.

L: Field Lighting
- L - by itself indicates temporary lighting, such as flares, smudge pots, lanterns.
- 1 - Portable lights (Electrical)
- 2 - Boundary
- 3 - Runway floods
- 4 - Runway or Strip
- 5 - Instrument approach (neon)
- 6 - High intensity runway
- 7 - High intensity instrument approach

* An asterisk preceding an element indicates that it operates on prior request only (by phone call, telegram or letter). Where the asterisk is not shown, the lights are in operation or available sunset to sunrise by request (circling the field or radio call).

Because the obstructions on virtually all lighted fields are obstruction lighted, obstruction lights have not been included in the codification.

SERVICING

S1: Storage
S2: Storage, minor aircraft repairs
S3: Storage, minor aircraft, and minor engine repairs
S4: Storage, major aircraft, and minor engine repairs
S5: Storage, major aircraft, and major engine repairs

NOTE: Any S combination without parenthesis indicates only full-time day attendant. Fields having lighting facilities may have 24 hours attendant available.

Any S combination in parenthesis-part time or irregular attendant.

WEATHER

W: Weather reports available from Weather Bureau or C.A.A. communications station on field.

FUEL OCTANE

Civil Fuel:

F1: 80 oct., at least
F2: 87 oct., and lower
F3: 91 oct., and lower
F4: 100 oct., and lower

NOTE: If only one octane available, this octane cited, and not coded.

Any F combination without parenthesis indicates full time day attendant, in parenthesis part-time or irregular attendant.

FUEL OCTANE (cont)

Air Force and Navy Fuel:

A+: 115/145 oct.
A : 100/130 oct.
B : 91/98 oct.
C : 73/80 oct.
J : JP - 1
J3: J-3

REMARKS

(a) "INACTIVE" indicates usable civil field, but not being operated, at last inspection. Caution advised.

(b) "CLOSED" indicates closed to all traffic except in emergency.

(c) "OFL BUS ONLY" indicates closed to all transient military aircraft except on official business or in emergency. U.S. Aircraft require written orders. "AF OFL BUS ONLY" or "NAVY OFL BUS ONLY" indicates applicability of restriction only to Service indicated.

(e) "INACT - NO FACS" indicates AF airfields used exclusively by the USAF or municipal fields used jointly by the USAF and civil interest at which both USAF and civil interest are inactive; these will be available to military aircraft at the discretion of the Commanding Officer of the organization to which aircraft are assigned.

(e) "CIVIL FACS ONLY" indicates municipal fields under joint control or ownership of the USAF and/or Navy and civil interests at which no USAF or Navy facilities are available. Such fields may be used by military aircraft; however, only commercial service is available.

(f) "LIMITED USE" indicates some special restriction on use of field which will be listed in Notices to Airmen section of Airman's Guide.

(g) "ABANDONED" indicates reverted to non-airport usage such as farming or grazing.

(h) "REPORTED ABANDONED" indicates an airport reported abandoned but not verified as such by C.A.A.

(i) "FEE" indicates landing charges for private or non-revenue producing aircraft. In addition, fees may be charged for planes that remain over a couple of hours and buy no services, or at major airline terminals for all aircraft.

(j) "+" indicates additional data in Notices to Airman Section.

(k) "Blkd" indicates approaches where glide angle to runway is 3:1 or less.

(l) "Rgt tfc N" indicates right turns should be made on landings and take-offs to N.

(m) "A,B" indicates Air Force or Navy fuel. See Fuel Octane column.

NOTES

1. → New or revised data.
2. SCHEDULED AIRLINE STOP airport names are capitalized.
3. PRIVATE AIRPORTS: Usually unattended, offer no public service and solicit no public patronage. Such fields are listed primarily because of their possible utility as emergency landing areas. Use of these fields is at the risk of the user. No "S" or "F" combination is ever assigned these fields.
4. OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, for example, clearly discernible for contact operations, are frequently omitted. On the other hand, all pole lines within at least 15:1 glide angle are indicated.
5. NEW AIRPORTS: At the end of each state, under this heading will be found, out of alphabetical alignment, all the new airports tabulated after the type for that state had been originally set up.

NAVY SPECIAL NOTICES

NAVY DATA: In accordance with Hydrographic Office Memorandum for Aviators, No. 17, September 17, 1948, before any changes or modifications of any aid to air navigation, such as realignment of radio ranges, modified instrument approach procedures, relocation of fan markers, etc., can be published by the Hydrographic Office, the Command requesting the change must first obtain approval from the Office of Chief of Naval Operations, Navy Department, Washington 25, D. C. When an approved change or modification has been made to any aid to air navigation, the Command shall immediately notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C.

All Naval Air Stations and Air Facilities are directed to notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C., direct, of all contemplated or immediate changes in their field facilities, operation rules, air-ground communication facilities, GCA, etc., and other factors affecting safe operation of aircraft which do not necessitate approval from CNO. This may be done by letter, speedletter, or dispatch, as applicable.

In accordance with Chief of Naval Operations Aviation Circular Letter 19-49 March 2, 1949, approval for the closing of any Navy or Marine Corps Air Station or Air Facility to transient military aircraft for a period in excess of ten days must be obtained from the Chief of Naval Operations.

Commanding Officers of Naval and Marine Corps aviation activities are directed to review all information published by the Hydrographic Office, U. S. Air Force, Civil Aeronautics Administration, and Coast and Geodetic Survey on facilities under their command and immediately forward any corrections or approved amendments direct to the publishing agency. A copy of the corrections or amendments to information published by other agencies should be forwarded to the Hydrographic Office. The charts and publications issued by the above-mentioned agencies must be currently maintained in order that all aviators can be kept informed of changes to airfields, seaplane anchorages, navigational aids, and other factors affecting the safe operation of aircraft.

AIR FORCE SPECIAL NOTICES

AIR FORCE DATA: Advice covering Air Force fields or Air Force operations on civil fields, or Air Force radio facilities, and also Air National Guard fields and facilities should be forwarded to: Commanding Officer, Aeronautical Chart & Information Service, Washington 25, D. C.; Attn: Aeronautical Information Division.

Requests for approval of the closing of Air Force airfields or restrictions in airfield facilities to transient military aircraft for over ten days should be forwarded through channels to Headquarters, U. S. Air Force. Restrictions in Air National Guard fields or facilities will be forwarded to the National Guard Bureau through the State Adjutant General for approval. Information to be published will be coordinated and submitted to the Civil Aeronautics Administration by Headquarters MATS.

In connection with the above, the attention of all base operations officers is invited to A. F. Regulation 55-12 of July 1, 1949, subject, "Notices to Airmen", A. F. Regulation 5-16 of February 20, 1948, subject, "Responsibilities for Flight Publications", and to A. F. Regulation 60-23 of September 23, 1947, subject, "Restrictions on Landing at Army Airfields"

AIR FORCE OFFICIAL BUSINESS: Air Force official business within the meaning of Air Force Regulation 85-2 is interpreted as the necessity for personnel aboard an aircraft to contact personnel, units, or organizations at or near the airfield selected for landing for the purpose of conducting transactions in the service of, and in the interest of, the United States Government. This does not include the use of an airfield by transient aircraft for the purpose of obtaining clearance, service, or other items attendant to itinerant operations. Cross country flights for the purpose of maintaining flying proficiency are not considered to be official business within the meaning of this regulation.

*Headquarters, USAF has directed following utilization only for communications as listed with a view to eliminating congestion: Channel A: IFR flight and such other traffic as required by CAA; Channel B: Immediate aircraft movements within control zone of airport; Channel C: Routine IFR and VFR flights and "company business".

**This frequency plan is effective upon completion of modification AN/ARC-1 guard channel in accordance with BuAer Technical Order to permit tuning to 121.5 mc. Prior to completion of this modification, 140.58 mc for CAA Airways will be carried in guard channel of AN/ARC-1 equipment, and 121.5 mc in Channel 1.

***In 4 channel equipment (ARC-5 and SCR-522) 126.18 mc or 142.02 mc may be substituted on Channel C and D in accordance with operational requirements.

UTILIZATION OF CAA VAR STATIONS BY MILITARY AIRCRAFT: The attention of pilots is directed to the fact that voice facilities are available at many VAR stations (see pages 90 thru 103, A.N. 08-15-1), and CAA communications stations are located thereat. Such VAR facilities should be utilized for navigational aid and communications services, particularly when standard low frequency facilities are not available.

AIR FORCE FOREIGN CLEARING STATIONS: Under the authority of Air Force Regulation 60-8 of July 6, 1949, U. S. Air Force aircraft with destinations listed below or returning therefrom to the United States will clear through the stations indicated:

AFRICA and AZORES: Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D. C.; or Westover AFB, Mass.

ALASKA: McChord AFB, Wash.; Great Falls AFB, Mont.; or Travis AFB, Calif.

BERMUDA: Mitchel AFB, N. Y.; Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D. C.; Travis AFB, Calif.; or Westover AFB, Mass.

CANADA: Great Falls AFB, Mont.; Brookley AFB, Ala.; McChord AFB, Wash.; Washington National Airport, D. C.; Selfridge AFB, Mich.; Westover AFB, Mass.; or Mitchel AFB, N. Y.

CANAL ZONE and MEXICO: March AFB, Calif.

CANAL ZONE, CENTRAL AMERICA, MEXICO, AND SOUTH AMERICA: MacDill AFB, Fla.; Kelly AFB, Texas; Brookley AFB, Ala.; Washington National Airport, D. C.

CARIBBEAN: Brookley AFB, Ala.; Kelly AFB, Texas; MacDill AFB, Fla.; Washington National Airport, D. C.

ENGLAND, GREENLAND, ICELAND, AND NORTH IRELAND: Washington National Airport, D. C.; or Westover AFB, Mass.

EUROPEAN THEATER: Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D. C.; Westover AFB, Mass.; or Kelly AFB, Texas.

HAWAII: Travis AFB, California.

NOVA SCOTIA and NEWFOUNDLAND: Washington National Airport, D. C.; Westover AFB, Mass.; Selfridge AFB, Mich.; Brookley AFB, Ala.; or Mitchel AFB, New York.

The classified "Foreign Clearance Information Guide", published by Aeronautical Chart and Information Service and now distributed to all Air Force bases should be consulted prior to departure for foreign clearing station, particularly with regard to diplomatic requirements for country for which clearance is desired, in order that appropriate advance notice of flight may be given and delay at foreign station may be avoided.

CURRENT FEDERAL AIRWAYS MANUALS OF OPERATION: The following publications are now distributed in accordance with AF Regulation 5-12, and supersede listing given in paragraph 5 of this regulation. Base operations officers, weather and communication units should check copies in use to insure that latest issues and all revisions are available. Mailing lists are now maintained in accordance with groupings of material as follows:

GROUP I MATERIAL: II-B. Instructions for the Operation of Communications Facilities, First Edition, January 15, 1950 (This replaces II-B-2, II-B-3, II-B-5, II-B-7, II-B-8 and II-B-11); M-59, November 5, 1949 (Service "B").

GROUP II MATERIAL: Location Identifiers, Fourth Edition, July 1, 1950, with two revisions.

GROUP III MATERIAL: Contractions, Fourth Edition, December 1, 1949.

GROUP IV MATERIAL: Civil Airways Mileage Chart of June 14, 1950.

GROUP V MATERIAL: Teletype Service "A" Manual, September 19, 1950; Teletype Service "C" Manual, January 9, 1951; Teletype Maps: M-11 December 1, 1949, and M-14, April 15, 1950 (Service "A"); M-10, October 1, 1949, and M-13, November 1, 1950 (Service "C"); M-58, August 15, 1950 (Service "A", "C", and "O").

GROUP VI MATERIAL: Teletype Service "O" Manual, May 1, 1950, with 6 revisions; Teletype Maps M-89, February 1, 1950 (Service "O") and M-58 (Service "A", "C" and "O").

Requests for distribution should be directed to Commanding Officer, Aeronautical Chart and Information Service, Washington 25, D. C. Attn: Aeronautical Information Division.

NEW USAF POLICY REGARDING USE OF INACTIVE FIELDS: In accordance with directive from Headquarters, USAF, Air Force fields which are on inactive status and are listed in the Directory as "INACT-NO FACS" will in the future be closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16, unless on official business with written orders.

COMPULSORY REPORTING POINTS - VAR RANGE FACILITIES: VAR Facilities designated by CAA and shown on radio facility charts as Compulsory Reporting Points will be applicable to USAF aircraft only if the aircraft is equipped with the necessary instruments and radio frequencies and if a flight plan has been filed with ATC declaring the intention to utilize these facilities. When ATC clearances include instructions using these facilities and the aircraft is not equipped for such use, the pilot should so advise the traffic control agency and request amended traffic control instructions.

PROVISION OF PLAIN LANGUAGE TERMINAL FORECASTS: All CAA communications facilities now provide Air Force pilots with terminal forecasts in plain language upon request. Terminal forecast information for all Air Force bases and for Patuxent River Naval Air Station, Maryland, will be available. Pilots should make full use of this service in requesting weather information.

SPECIAL CHARTS OF ATOMIC ENERGY AIRSPACE RESERVATIONS: The Atomic Energy Commission has issued a special chart depicting airspace reservations in the United States. Copies of this chart are being supplied each Air Force Base, AF Reserve Unit, National Guard Unit and other activities on the same mailing list basis as used for Airman's Guide. Operations officers should prominently display this chart and assure that pilots contemplating flight adjacent to these areas are briefed upon their existence, location and restricted status.

IMPLEMENTATION OF 135.90 MC AS CAA AIRWAYS FREQUENCY: Use of 140.58 mc as CAA airways station frequency discontinued April 1, 1951. Concurrently, 135.90 mc or 135.9/135 mc was implemented. In order to improve communications on Channel A, simplex operation on USAF aircraft was changed to single channel duplex operation for that channel; a receiving crystal on 135 mc and a transmitting crystal on 135.90 were installed in Channel A to replace 140.58 mc. Navy aircraft will continue to operate on a simplex basis and the frequency of 135.90 mc replaced 140.58 mc in Navy Channels 1 and D. Coast Guard aircraft now use 135.90 mc simplex in lieu of 140.58 mc but will in the near future convert equipment so as to transmit on 135.90 mc and receive on 135mc. CAA airways stations transmit on frequency of 135 mc and receive on 135.90 mc for USAF aircraft; transmits and receive 135.90 mc for Navy aircraft; for Coast Guard aircraft as required by current method of operation.

Effective with this implementation of new CAA airways frequencies in the United States Air Force, Navy and Coast Guard aircraft, USAF and Coast Guard aircraft equipped for simplex operation on frequency 135.90 mc/s will add the word "SIMPLEX" to the aircraft radio call sign when communication with CAA airways stations on Channel "A" and when filing flight plans to be transmitted to or by Civil Aeronautics Administration.

NEW IFR POSITION REPORT PROCEDURE FOR MILITARY AIRCRAFT FLYING ABOVE 17,200 FT. Effective March 15, 1951, the normal requirement for position reports under IFR at each designated compulsory reporting point will not apply to aircraft flying above 17,200 feet. All aircraft flying above 17,200 feet will designate established reporting points or other check points describing the route of flight in the flight plan on the basis of one (1) reporting point each 200 miles. IFR poisition reports will only be required at these previously designated points and if necessary at any additional points requested by ARTC. Jet pilots should take full advantage of this position reporting procedure.

CIVIL SPECIAL NOTICES

CIVIL DATA: The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or a runway partially unusable because of construction.

Obviously, temporary hazardous conditions should be reported to the aeronautical public at once. The necessity for reporting additional aids or minor changes in existing aids, however, isn't nearly as cogent. In other words, a temporarily closed airport is ordinarily of much more importance from a safety viewpoint than is a new airport, and the aeronautical public should be told about it as expeditiously as possible.

Notamizing of advice covering a field unusable because of flood or snow, a runway closed because of construction, or the erection of a pole-line in an approach, doesn't necessitate an engineering background on the part of the reporter. Too, safety frequently necessitates the notamizing of such advice before an official check can be made. On the other hand, advice covering permanent airport data changes, such as a new airport, or a lengthened landing strip, or an additional hangar, obviously doesn't require the same expeditious transmission to the aeronautical public, and the data may be checked from an engineering standpoint and for standardization before being publicized.

SUMMATION: (a) Since the aeronautical public should be immediately advised of hazardous condition, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the Office of Aviation Development, Attention: W-155, C.A.A., Washington 25, D. C.)

(b) Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate C.A.A. District Airport Engineer for coordination before they are included in the Airman's Guide.

FLIGHTS INTO CANADA: No photographic equipment may be installed in, nor may any photographs be taken from any U. S. aircraft operating in or over Canadian territroty.

OMNIRANGE USE: The effectiveness of the omnirange (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries.

CIVIL USAGE OF MILITARY FIELDS: U. S. Air Force and Navy fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

DIRECTORY OF AIRPORTS AND AIR NAVIGATION RADIO AIDS NOTAMS: Because of space limitation, the Airport Directory and Air Navigation Radio Aids perforce serve as a notam supplement. Notam data revising a previous Directory or ANRA are indicated by prefixed arrows. The only airport or radio data (other than temporary conditions of short duration) carried in the Notices to Airmen Section are facility coordinates, post-deadline data, or data impossible to incorporate in the two above tabulations.

FLYING OVER FOREIGN TERRITORY: All aircraft operators are urgently cautioned that no over-flights of foreign territory should be made without authorization from the foreign government concerned, and then only in accordance with authorized procedures.

Safety of crews, passengers and aircraft require that every precaution be taken to follow such procedures, particularly with Iron Curtain countries.

DIRECT COMMUNICATIONS WITH AIR ROUTE TRAFFIC CONTROL CENTERS: The CAA has inaugurated a procedure whereby pilots operating on IFR flight plans may have direct communication with air route traffic controllers at certain control centers. VHF on a simplex basis (call-up and reply on the same frequency) is used. This enables the controller to issue traffic clearances and receive indications of compliance therewith in such a manner that all air traffic is expedited. The center will guard the assigned frequency. However, each specific aircraft, with which the center desires to establish direct communication for control purposes, will receive a clearance through the appropriate CAA, AACS or Air Carrier Communications Station, indicating the time or place the controller desires to communicate directly with the pilot.

The following locations at which this direct communications procedure is available are also listed in the Air Navigation Radio Aids Section of the Airman's Guide. Each one is listed alphabetically following the tower listing. When additional locations establish this procedure they will be similarly listed:

VHF OMNITEST SIGNAL FACILITIES: Experimental VHF omnitest signal facilities have been installed at the New York (LaGuardia 112.0 mc), Chicago (Midway 112.0 mc), and Kansas City (Municipal 113.0 mc) airports. These facilities permit checking of aircraft navigational VOR receivers during a ramp test or while in flight near the airport. The facility radiates a 0° course in all directions with a power output of about 10 watts. The identification consists of continuous dots without voice. Each facility is continuously monitored and will shut down automatically if the 0° course varies by more than one degree from normal or in case the identification fails. Flight checks indicate that the omnitest signal is usable to a distance of about ten miles at minimum instrument altitude although regions of weak and unreliable signal may be encountered at shorter distances. The omnirtest signal may be regarded as dependable when there is no flag alarm showing or where no flag alarm is incorporated in the aircraft unit and the identification is received free from interference and noise. Comment from airmen will be appreciated. Please forward same to: Civil

Aeronautics Administration, Washington 25, D. C., Attention: W-380.

RECEIVER OMNITEST PROCEDURE - Receivers with omni-Bearing Selectors (OBS)

Tune in omnitest frequency. The "To-From" indicator should read "To" or "From" and the alarm flag, if one is used, should disappear.

Set OBS in vicinity of 0° to center "Deviation" indicator. The "To-From" indicator should read "From" and the difference between0° and the actual OBS reading indicates the amount of calibration error in the airborne equipment.

Set OBS in vicinity of 180° to again center "Deviation" indicator. The "To-From" indicator should read "To" and the difference between 180° and the actual OBS reading indicates the amount of calibration error in the airborne equipment.

With the "Deviation" indicator centered in the 180° position rotate OBS clockwise until "Deviation" indicator reads full scale or five dots to left. Note OBS reading. Next rotate OBS counterclockwise until "Deviation" indicator reads full scale or five dots to right. Note OBS reading. The difference between the two OBS readings is a measure of receiver course sensitivity.

If instrumentation includes a radio magnetic indicator (RMI) the pointer on this instrument connected to the receiver being checked should be observed. This pointer should indicate 180° ± 1 degree regardless of the setting of the OBS.

Automatic Indicating Receivers: Automatic indicating receivers do not have an Omni-Bearing Selector or a "To-From" indicator and have no ambiguity. The only course that can be checked is 0° which is automatically indicated when the receiver is turned on and tuned to the correct frequency.

✓PROVISION OF PLAIN LANGUAGE TERMINAL FORECASTS: CAA communications facilities now provide Air Force pilots with terminal forecasts in plain language upon request. Terminal forecast information for all Air Force bases and for Patuxent River Naval Air Station, Maryland will be available. Pilots should make full use of this service in requesting weather information.

✓ON-REQUEST REPORTING POINT: Effective April 15, 1951, the following on-request reporting point is established: COATESVILLE-INTSXN - the intsxn of the E crs of the Harrisburg, Pa. rng and the S crs of the Reading, Pa. ILS lclzr.

✓NON-STANDARD HOLDING PATTERN: Effective April 15, 1951, the following non-standard holding pattern is established: Holding point - Coatesville intsxn; Direction from the Holding Point - E; Direction of turn - RIGHT on the S side of the E crs of Harrisburg, Pa. rng; Time: 2 minutes; Min. alt: 2000'.

✓INSTRUMENT APPROACH PROCEDURES: The standard instrument approach procedures for the following airports have been CANCELLED: Low Frequency Range: Blackstone, Va., Blackstone AAF, effective Mar. 27, 1951. Fallon, Nev., Fallon OLF, effective Mar. 16, 1951.

Very High Frequency Range: El Dorado, Ark., El Dorado- Goodwin Field, effective Mar. 21, 1951.

Automatic Direction Finding: Atlanta, Ga., Atlanta Airport, effective Mar. 12, 1951.

✓CORRECTIONS TO AERONAUTICALS CHARTS: (1) Correct WAC chart 357 dtd Jan. 9, 1951, Washington, D. C. twr by showing transmitting and rcvg 126.18 mc corrected to read 137.88 mc.

(2) Correct WAC Chart 409, dtd Jan. 28, 1951 by showing RACON X-band 2-2 as associated with Hunter AFB instead of Travis Field at Savannah, Ga.

✓DANGER AREA VIOLATIONS (WARREN GROVE, N. J.): Information received from the Navy discloses that numerous acft, both military and civilian have flown directly over this area at altitudes of less than 10,000' while operations were in progress. These unauthorized flights seriously hamper operations and the occurrance of a serious accident is a grave possibility. 8 0

The subject area is clearly marked on all Dept. of Commerce flight charts and is described in detail in the Flight Information Manual. It is in continuous use from the surface to 10,000' within the following coordinates: Beginning at lat. 39-45-28, long. 74-19-26; SE to lat. 39-42-18, long. 74-17-18; SW to lat. 39-39-07, long. 74-25-27; NW to la.. 39-41-00, long. 74-26-30; N to lat. 39-42-30, long. 74-26-15; NE to point of beinning.

✓DANGER AREA DESIGNATIONS: The following Danger Area amendment shall be effective on April 13, 1951, unless otherwise advised:

The Matagorda Island, Texas, area, published on April 21, 1949, in 14. F. R. 1913, and revised on November 10, 1950, in 15 F. R. 7548, is further revised by adding the following: Location: Matagorda Island (San Antonio Chart); Description: AREA III: Beginning at lat. 28-14-30N, long. 96-36-00W; Southwesterly along the offshoreline of matagorda Island to lat. 28-03-30N, long. 96-51-30W; northeasterly along the in-shoreline of Matagorda Island to lat. 28-15-30N, long. 96-37-00W; SE to lat 28-14-30N, long. 96-36-00W, point of beginning; Altitudes: Surface to 20,000 ft.; Time: Daylgt hrs, 7 days a week; Using Agency: 8th Air Force, Carswell AFB, Ft. Worth, Texas.

AIR NAVIGATION RADIO AIDS

INSAC = Interstate Airway Communications Station (CAA).

VHF OMNI-RANGES: "Non-commissioned" VHF omni-ranges may lack certain items, such as monitoring or control equipment or may not have been flight-checked and are subject to shut-down at any time without notice. The courses may or may not be within the prescribed tolerances and the station is to be used accordingly.

NOTE: See OMNIRANGE USE, page 79.

VAR AND VOR MONITORING CLASSIFICATION FOR AIR TRAFFIC CONTROL PURPOSES: Category I (VAR) = Following conditions must be met: (A) The visual course alignment and signal level are monitored continuously. (B) The aural "A" or "N" sector signal is monitored continuously by the communicator at the associated INSAC. (C) The station identification is monitored continusouly by the communicator at the associated INSAC. (D) The aural course alignment is monitored at least once each hour by the communicator at the associated INSAC. Category I (VOR) = Course alignment and signal level are monitored continuously. NOTE: Category I indicated by parenthetical (1). Category II (VAR only) = If all except (D) of the conditions of Category are met. NOTE: Category II indicated by parenthetical (2). Category III = Facility monitored solely through use of automatic visual course and signal level monitor with automatic transfer unit. This category may permit VOR to be inoperative for a limited period before a notice to airmen is issued. Normally, VHF ranges which are not controlled by an INSAC, and located too distant from INSAC to be monitored with a VHF receiver will fall into Category III. NOTE: Category III indicated by parenthetical (3).

LEGEND

(A) = Air Force facility. (N) = Navy facility. (P) = Private facility
(g) = Tower equipped with 121.9 or 121.7 mc transmitter for control of ground traffic. (7-19) = Hours of operation, i.e., 0700-1900
(U) = Unmonitored, but usable for navigation (3) = Monitoring category
(B) = Blue Hemisphere; (Y) = Yellow hemisphere
→ = New or revised data
✓ = New facilities or name changes, see page 20
\+ = Additional data will be found in Notices to Airmen Section

NOTE: Letters between range crs are quadrant identifiers, e.g., "90 YN 180" indicates the quadrant between the two crs is a yellow N quadrant. The letter immediately following a range crs indicates whether the course is aural or visual, i.e., "Y" or "B", for yellow or blue, indicates visual: "A" or "N", arual. In the case of low frequency ranges, the A or N cited between two courses is the identification to be heard in the quadrant between those two courses.

RADIO CLASS DESIGNATIONS

AC. . . Approach Control Tower, CAA (transmits on voice channel of associated L/MF range or ILS in addition to frequencies listed)
B. . . . Scheduled Broadcast Station (broadcasts weather at 15 & 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes)
C. . . . Control Tower, CAA
CA. . . Control Tower, Air Force
CI. . . Control Tower (City, County, Private, etc.)
CN. . . Control Tower, Navy
D. . . . Distantly controlled
FM. . . VHF fan marker (100 watts)
GCA. . Ground Controlled approach system
H. . . . Non-directional radio beacon (homing), power 50 watts to less than 2000 watts
HH. . . Non-directional radio beacon (homing), power 2000 watts or more
ILS . . . Instrument Landing System (voice on localizer channel)
J. . . . L/MF (200 - 415 kc) voice facility on other than range frequency
LFM. . VHF fan marker, low powered (5 watts)
LMM. . Compass locator station when combined with middle marker of ILS
LOM. . Compass locator when installed at outer marker site or within 5.5 miles of middle marker
MH. . Non-directional radio beacon (homing) power less than 50 watts
ML. . Range (loop radiators), power less than 50 watts
MM. . VHF middle marker
MOR. . Low frequency omni-directional range
MRA. . Range (adcock, vertical radiators), power 50 or more, but less than 150 watts
MRL. . Range (loop radiators), power 50 or more, but less than 150 watts
OM. . . VHF outer marker
P. . . . Point-to-Point radio
RA. . . Range (adcock, vertical radiators), power 150 watts or more
RL. . . Range (loop radiators), power 150 watts or more
S. . . . Simultaneous (range signals and voice) type of transmitter
T. . . . Teletype
TX. . . Principal teletype
V. . . . Additional VHF voice feature on other then range frequency
VAR. . Visual-aural VHF range
VOR. . Omni VHF omni-directional range (omni-range)
W . . Without voice facilities
Z . . . . VHF station location marker at a range station.

FREQUENCY LEGEND

V = 135.9,135.0 and 111.1 mc transmitted.
# = Guards same VHF frequencies station transmits except 111.1 mc and 135.0 mc.
(1) = 3105,4495 kc guarded
(2) = 3105. 4495kc; 122.5 mc. This group of frequencies is group generally guarded by C.A.A. towers.
(3) = 3105,4495 kc; 122.1,126.7, 135.9 mc. This group of frequencies is group generally guarded by INSACS.
e.g., (3) - 135.9, 122.1 = guards every frequency in group (3) except 135.9 and 122.1

NOTES

1. Range courses are magnetic in bearings.
2. All C.A.A. MH facilities operate continuously unless cited as follows: (on req)
3. All C.A.A. ranges operate continuously. Those which are not manned continuously are cited in the class column with hours of operation in parentheses, e.g., (6-24)
4. When a VHF is controlled by an associated LF range, because of space limitation; DTV is not included in the VHF range class.

Pilots are requested to indicate when calling C.A.A. airway communications stations and control towers the frequency on which the reply is expected.

RADAR AVAILABLE

GCA= GROUND CONTROLLED APPROACH - COMPRISED OF TWO UNITS - PAR and ASR.
PAR= PRECISION APPROACH RADAR. ASR= AIRPORT SURVEILLANCE RADAR.

GROUND CONTROLLED APPROACHES - The only airborne equipment required for ground controlled approaches is a functioning radio transmitter and receiver. There are two types of ground controlled approaches - Precision and Surveillance (PPI).

PRECISION APPROACHES-Aircraft are guided to final approach to the designated instrument runway. The final approach flight path on a precision scope (PAR) is greatly expanded for increased accuracy and furnishes the controller with range, azimuth and altitude information. This permits the controller to accurately guide aircraft to touchdown on the runway. However, the weather minimums listed below apply.

SURVEILLANCE or PPI APPROACHES - **Only the ASR scope is used and aircraft may be** directed to any selected runway over approximately **the same flight path the pilot would take if** flying VFR. This scope furnishes range and azimuth **information only. Since no altitude information** is available to the controller, pilots **must control their descent based on the glide angle** desired, **and the** distance from **the runway as furnished by the controller. Because ASR does not permit** the **same degree of accuracy as PAR the weather minimums for this type of approach must be equal to, or better than the regular (R) minimums as listed in Flight Information Manual for the airport.**

CAA RADAR UNITS - Operate continuously at the locations listed. Available to all pilots, civil and military. Contact associated CAA control tower on any frequency guarded for initial instructions, **or in an emergency any CAA facility for information on nearest Radar Control.**

How and Where

AIR FORCE AND NAVY GCA UNITS - Available to civil pilots in emergency or by prior arrangement with C.O. of respective facility.

Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call the nearest air traffic control facility (radio, airways, or tower, etc.) requesting GCA and further instructions.

Contact under VFR: VFR check-out of training flights should be arranged locally through Base Operations or the Control Tower.

Emergency: When receiver or transmitter difficulties exist, the tower may relay GCA approach instructions to the pilot, or the GCA operator may transmit, in blind, instructions for aircraft to make three hundred sixty (360) degree turns for identification. In either case, instructions will be followed at the pilot's discretion.

After being inoperative, GCA units require 20 to 30 minutes for warming up. Pilots should anticipate requirements for GCA in flight planning and request alerting of GCA units as far in advance as possible.

Civil minimums at military installations established by the CAA are 400' ceiling and 1 mile visibility except in emergency unless Air Force or Navy facility being used has higher minimums.

Navy units are prepared to transmit on HF from 2000 to 18,100 kc and receive any frequency from 1500 to 9050 kc to aid any plane in emergency.

Alt MSL=Min. alt. over airport.

DIRECTORY OF AIRPORTS
LEGEND

CITY AND AIRPORT NAME

(AF) Airport name followed by city name in parenthesis (With AF in Type Column) - field owned or leased in whole by U.S. Air Force.

(AF) City and Airport Name (with C,I,M,MG or P in Type Column) - a civil airport with Air Force operations, reserve training, or other such acitvity thereon.

NOTE: Similar combinations of above two citations of A,N,CG, and NG indicate the same is applicable for Army, Navy, Coast Guard, and National Guard fields respectively.

(P) City and Airport Name - Civil Airport covered by an agreement between municipality and U.S. Government which permits use by transient military aircraft.

(PC) Same legal status as (P), but closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16.

★ City, Site No., and Airway abbreviation - CAA intermediate field. Municipal airports with lights maintained by the CAA are listed similarly except there is no prefixed star.

NOTES:

1. MILITARY FIELDS ARE OPEN TO CIVIL AIRCRAFT ONLY BY PRIOR PERMISSION OF THE C.O. THEREOF. ALL AIRPORTS with C,I,M, or MG in type column are open to civil fliers.

2. USAF aircraft are permitted to use only those fields prefixed with an AF,A,N,NG,CG,P,PC or ★.

3. When city and airport names are identical, the airport name is omitted to conserve space.

TYPE

AF	-Air Force	CG	-Coast Guard	MG	-Misc. Govt
A	-Army	I	-Intermediate	N	-Navy
C	-Commercial	M	-Municipal	NG	-Nat'l Guard
				P	-Private

LOCATION

The word "miles" has been eliminated because of space limitations. Mileage is that from the center of city to airport.

If orientation features are less than 1/2 mile from the field, distance is not specified

ELEVATION

Obviously, the effective length of a runway decreases with elevation above sea level. The C.A.A. formula for elevation correction is that a sea level runway length requirement must be increased 7% per 1000 feet of elevation above sea level. High temperatures also play an important role in reducing the effective length of runways.

NUMBER OF RUNWAYS

No differentiation is made between runways and strips as far as number of landing areas in field is concerned.

LONGEST RUNWAY

FACILITIES

In this column are included the length and surfacing of the longest runway, the lighting and servicing facilities, and weather reports available.

RUNWAYS

The length of the longest paved runway or non-paved strip is stated in hundreds of feet. If the length is not prefixed, the surface is sod, clay, gravel, etc.

h - runway is paved (concrete, asphalt or similar type of paving)

aw - allway field

(26) - runway or strip length not verified by C.A.A.

LIGHTS

B: Rotating Light (Rotating beacon)
(Green and white, split-beam and other types)
Omission of B indicates rotating light is not available.

NOTE: Code lights are not codified, and are carried in Remarks Column.

L: Field Lighting

- L - by itself indicates temporary lighting, such as flares, smudge pots, lanterns.
- 1 - Portable lights (Electrical)
- 2 - Boundary
- 3 - Runway floods
- 4 - Runway or Strip
- 5 - Instrument approach (neon)
- 6 - High intensity runway
- 7 - High intensity instrument approach

✱ An asterisk preceding an element indicates that it operates on prior request only (by phone call, telegram or letter). Where the asterisk is not shown, the lights are in operation or available sunset to sunrise by request (circling the field or radio call).

Because the obstructions on virtually all lighted fields are obstruction lighted, obstruction lights have not been included in the codification.

SERVICING

S1: Storage
S2: Storage, minor aircraft repairs
S3: Storage, minor aircraft, and minor engine repairs
S4: Storage, major aircraft, and minor engine repairs
S5: Storage, major aircraft, and major engine repairs

NOTE: Any S combination without parenthesis indicates only full-time day attendant. Fields having lighting facilities may have 24 hours attendant available.

Any S combination in parenthesis-part time or irregular attendant.

WEATHER

W: Weather reports available from Weather Bureau or C.A.A. communications station on field.

FUEL OCTANE

Civil Fuel:

F1: 80 oct., at least
F2: 87 oct., and lower
F3: 91 oct., and lower
F4: 100 oct., and lower

NOTE: If only one octane available, this octane cited, and not coded.

Any F combination without parenthesis indicates full time day attendant, in parenthesis part-time or irregular attendant.

FUEL OCTANE (cont).

Air Force and Navy Fuel:

A+:	115/145 oct.	C :	73/80 oct.
A :	100/130 oct.	J :	JP - 1
B :	91/98 oct.	J3:	J-3

REMARKS

(a) "INACTIVE" indicates usable civil field, but not being operated, at last inspection. Caution advised.

(b) "CLOSED" indicates closed to all traffic except in emergency.

(c) "OFL BUS ONLY" indicates closed to all transient military aircraft except on official business or in emergency. U.S. Aircraft require written orders. "AF OFL BUS ONLY" or "NAVY OFL BUS ONLY" indicates applicability of restriction only to Service indicated.

(c) "INACT - NO FACS" indicates AF airfields used exclusively by the USAF or municipal fields used jointly by the USAF and civil interest at which both USAF and civil interest are inactive; these will be available to military aircraft at the discretion of the Commanding Officer of the organization to which aircraft are assigned.

(e) "CIVIL FACS ONLY" indicates municipal fields under joint control or ownership of the USAF and/or Navy and civil interests at which no USAF or Navy facilities are available. Such fields may be used by military aircraft; however, only commercial service is available.

(f) "LIMITED USE" indicates some special restriction on use of field which will be listed in Notices to Airmen section of Airman's Guide.

(g) "ABANDONED" indicates reverted to non-airport usage such as farming or grazing.

(h) "REPORTED ABANDONED" indicates an airport reported abandoned but not verified as such by C.A.A.

(i) "FEE" indicates landing charges for private or non-revenue producing aircraft. In addition, fees may be charged for planes that remain over a couple of hours and buy no services, or at major airline terminals for all aircraft.

(j) "+" indicates additional data in Notices to Airman Section.

(k) "Blkd" indicates approaches where glide angle to runway is 3:1 or less.

(l) "Rgt tfc N" indicates right turns should be made on landings and take-offs to N.

(m) "A,B" indicates Air Force or Navy fuel. See Fuel Octane column.

NOTES

1. ★ - New or revised data.
2. SCHEDULED AIRLINE STOP airport names are capitalized.
3. PRIVATE AIRPORTS: Usually unattended, offer no public service and solicit no public patronage. Such fields are listed primarily because of their possible utility as emergency landing areas. Use of these fields is at the risk of the user. No "S" or "F" combination is ever assigned these fields.
4. OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, for example, clearly discernible for contact operations, are frequently omitted. On the other hand, all pole lines within at least 15:1 glide angle are indicated.
5. NEW AIRPORTS: At the end of each state, under this heading will be found, out of alphabetical alignment, all the new airports tabulated after the type for that state had been originally set up.

NOTICES TO AIRMEN

SPECIAL NOTICES

NAVY SPECIAL NOTICES

NAVY DATA: In accordance with Hydrographic Office Memorandum for Aviators, No. 17, September 17, 1948, before any changes or modifications of any aid to air navigation, such as realignment of radio ranges, modified instrument approach procedures, relocation of fan markers, etc., can be published by the Hydrographic Office, the Command requesting the change must first obtain approval from the Office of Chief of Naval Operations, Navy Department, Washington 25, D. C. When an approved change or modification has been made to any aid to air navigation, the Command shall immediately notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C.

All Naval Air Stations and Air Facilities are directed to notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C., direct, of all contemplated or immediate changes in their field facilities, operation rules, air-ground communication facilities, GCA, etc., and other factors affecting safe operation of aircraft which do not necessitate approval from CNO. This may be done by letter, speedletter, or dispatch, as applicable.

In accordance with Chief of Naval Operations Aviation Circular Letter 19-49 March 2, 1949, approval for the closing of any Navy or Marine Corps Air Station or Air Facility to transient military aircraft for a period in excess of ten days must be obtained from the Chief of Naval Operations.

Commanding Officers of Naval and Marine Corps aviation activities are directed to review all information published by the Hydrographic Office, U. S. Air Force, Civil Aeronautics Administration, and Coast and Geodetic Survey on facilities under their command and immediately forward any corrections or approved amendments direct to the publishing agency. A copy of the corrections or amendments to information published by other agencies should be forwarded to the Hydrographic Office. The charts and publications issued by the above-mentioned agencies must be currently maintained in order that all aviators can be kept informed of changes to airfields, seaplane anchorages, navigational aids, and other factors affecting the safe operation of aircraft.

AIR FORCE SPECIAL NOTICES

AIR FORCE DATA: Advice covering Air Force fields or Air Force operations on civil fields, or Air Force radio facilities, and also Air National Guard fields and facilities should be forwarded to: Commanding Officer, Aeronautical Chart & Information Service, Washington 25, D. C.; Attn: Aeronautical Information Division.

Requests for approval of the closing of Air Force airfields or restrictions in airfield facilities to transient military aircraft for over ten days should be forwarded through channels to Headquarters, U. S. Air Force. Restrictions in Air National Guard fields or facilities will be forwarded to the National Guard Bureau through the State Adjutant General for approval. Information to be published will be coordinated and submitted to the Civil Aeronautics Administration by Headquarters MATS.

In connection with the above, the attention of all base operations officers is invited to A. F. Regulation 55-12 of July 1, 1949, subject, "Notices to Airmen", A. F. Regulation 5-16 of February 20, 1948, subject, "Responsibilities for Flight Publications", and to A. F. Regulation 60-23 of September 23, 1947, subject, "Restrictions on Landing at Army Airfields".

AIR FORCE OFFICIAL BUSINESS: Air Force official business within the meaning of Air Force Regulation 85-2 is interpreted as the necessity for personnel aboard an aircraft to contact personnel, units, or organizations at or near the airfield selected for landing for the purpose of conducting transactions in the service of, and in the interest of, the United States Government. This does not include the use of an airfield by transient aircraft for the purpose of obtaining clearance, service, or other items attendant to itinerant operations. Cross country flights for the purpose of maintaining flying proficiency are not considered to be official business within the meaning of this regulation.

*Headquarters, USAF has directed following utilization only for communications as listed with a view to eliminating congestion: Channel A: IFR flight and such other traffic as required by CAA; Channel B: Immediate aircraft movements within control zone of airport; Channel C: Routine IFR and VFR flights and "company business".

**This frequency plan is effective upon completion of modification AN/ARC-1 guard channel in accordance with BuAer Technical Order to permit tuning to 121.5 mc. Prior to completion of this modification, 140.58 mc for CAA Airways will be carried in guard channel of AN/ARC-1 equipment, and 121.5 mc in Channel 1.

***In 4 channel equipment (ARC-5 and SCR-522) 132.3 mc or 142.02 mc may be substituted on Channel C and D in accordance with operational requirements.

UTILIZATION OF CAA VAR STATIONS BY MILITARY AIRCRAFT: The attention of pilots is directed to the fact that voice facilities are available at many VAR stations (see pages 90 thru 103, A.N. 08-15-1), and CAA communications stations are located thereat. Such VAR facilities should be utilized for navigational aid and communications services, particularly when standard low frequency facilities are not available.

AIR FORCE FOREIGN CLEARING STATIONS: Under the authority of Air Force Regulation 60-8 of July 6, 1949, U. S. Air Force aircraft with destinations listed below or returning therefrom to the United States will clear through the stations indicated:

AFRICA and AZORES: Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D. C.; or Westover AFB, Mass.

ALASKA: McChord AFB, Wash.; Great Falls AFB, Mont.; or Travis AFB, Calif.

BERMUDA: Mitchel AFB, N. Y.; Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D. C.; Travis AFB, Calif.; or Westover AFB, Mass.

CANADA: Great Falls AFB, Mont.; Brookley AFB, Ala.; McChord AFB, Wash.; Washington National Airport, D. C.; Selfridge AFB, Mich.; Westover AFB, Mass.; or Mitchel AFB, N. Y.

CANAL ZONE and MEXICO: March AFB, Calif.

CANAL ZONE, CENTRAL AMERICA, MEXICO, AND SOUTH AMERICA: MacDill AFB, Fla.; Kelly AFB, Texas; Brookley AFB, Ala.; Washington National Airport, D. C.

CARIBBEAN: Brookley AFB, Ala.; Kelly AFB, Texas; MacDill AFB, Fla.; Washington National Airport, D. C.

ENGLAND, GREENLAND, ICELAND, AND NORTH IRELAND: Washington National Airport, D. C.; or Westover AFB, Mass.

EUROPEAN THEATER: Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D. C.; Westover AFB, Mass.; or Kelly AFB, Texas.

HAWAII: Travis AFB, California.

NOVA SCOTIA and NEWFOUNDLAND: Washington National Airport, D. C.; Westover AFB, Mass.; Selfridge AFB, Mich.; Brookley AFB, Ala.; or Mitchel AFB, New York.

The classified "Foreign Clearance Information Guide", published by Aeronautical Chart and Information Service and now distributed to all Air Force bases should be consulted prior to departure for foreign clearing station, particularly with regard to diplomatic requirements for country for which clearance is desired, in order that appropriate advance notice of flight may be given and delay at foreign station may be avoided.

CURRENT FEDERAL AIRWAYS MANUALS OF OPERATION: The following publications are now distributed in accordance with AF Regulation 5-12, and supersede listing given in paragraph 5 of this regulation. Base operations officers, weather and communication units should check copies in use to insure that latest issues and all revisions are available. Mailing lists are now maintained in accordance with groupings of material as follows:

GROUP I MATERIAL: II-B. Instructions for the Operation of Communications Facilities, First Edition, January 19, 1950 (This replaces II-B-2, II-B-3, II-B-5, II-B-7, II-B-8 and II-B-11); M-59, November 5, 1949 (Service "B").

GROUP II MATERIAL: Location Identifiers, Fourth Edition, July 1, 1950, with two revisions.

GROUP III MATERIAL: Contractions, Fourth Edition, December 1, 1949.

GROUP IV MATERIAL: Civil Airways Mileage Chart of Dec. 27, 1950.

GROUP V MATERIAL: Teletype Service "A" Manual, September 19, 1950; Teletype Service "C" Manual, January 9, 1951; Teletype Maps: M-11 December 1, 1949, and M-14, April 15, 1950 (Service "A"); M-10, October 1, 1949, and M-13, November 1, 1950 (Service "C"); M-58, August 15, 1950 (Service "A", "C", and "O").

GROUP VI MATERIAL: Teletype Service "O" Manual, May 1, 1950, with 6 revisions; Teletype Maps M-59, February 1, 1950 (Service "O") and M-58 (Service "A", "C" and "O").

Requests for distribution should be directed to Commanding Officer, Aeronautical Chart and Information Service, Washington 25, D. C. Attn: Aeronautical Information Division.

NEW USAF POLICY REGARDING USE OF INACTIVE FIELDS: In accordance with directive from Headquarters, USAF, Air Force fields which are on inactive status and are listed in the Directory as "INACT-NO FACS" will in the future be closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16, unless on official business with written orders.

COMPULSORY REPORTING POINTS - VAR RANGE FACILITIES: VAR Facilities designated by CAA and shown on radio facility charts as Compulsory Reporting Points will be applicable to USAF aircraft only if the aircraft is equipped with the necessary instruments and radio frequencies and if a flight plan has been filed with ATC declaring the intention to utilize these facilities. When ATC clearances include instructions using these facilities and the aircraft is not equipped for such use, the pilot should so advise the traffic control agency and request amended traffic control instructions.

PROVISION OF PLAIN LANGUAGE TERMINAL FORECASTS: All CAA communications facilities now provide Air Force pilots with terminal forecasts in plain language upon request. Terminal forecast information for all Air Force bases and for Patuxent River Naval Air Station, Maryland, will be available. Pilots should make full use of this service in requesting weather information.

SPECIAL CHARTS OF ATOMIC ENERGY AIRSPACE RESERVATIONS: The Atomic Energy Commission has issued a special chart depicting airspace reservations in the United States. Copies of this chart are being supplied each Air Force Base, AF Reserve Unit, National Guard Unit and other activities on the same mailing list basis as used for Airman's Guide. Operations officers should prominently display this chart and assure that pilots contemplating flight adjacent to these areas are briefed upon their existence, location and restricted status.

CIVIL SPECIAL NOTICES

CIVIL DATA: The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or a runway partially unusable because of construction.

(4-24-51)

Obviously, temporary hazardous conditions should be reported to the aeronautical public at once. The necessity for reporting additional aids or minor changes in existing aids, however, isn't nearly as cogent. In other words, a temporarily closed airport is ordinarily of much more importance from a safety viewpoint than is a new airport, and the aeronautical public should be told about it as expeditiously as possible.

Notamizing of advice covering a field unusable because of flood or snow, a runway closed because of construction, or the erection of a pole-line in an approach, doesn't necessitate an engineering background on the part of the reporter. Too, safety frequently necessitates the notamizing of such advice before an official check can be made. On the other hand, advice covering permanent airport data changes, such as a new airport, or a lengthened landing strip, or an additional hangar, obviously doesn't require the same expeditious transmission to the aeronautical public, and the data may be checked from an engineering standpoint and for standardization before being publicized.

SUMMATION: (a) Since the aeronautical public should be immediately advised of hazardous condition, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the Office of Aviation Development, Attention: W-155, C.A.A., Washington 25, D. C.)

(b) Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate C.A.A. District Airport Engineer for coordination before they are included in the Airman's Guide.

FLIGHTS INTO CANADA: No photographic equipment may be installed in, nor may any photographs be taken from any U. S. aircraft operating in or over Canadian terriroty.

OMNIRANGE USE: The effectiveness of the omnirange (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries.

CIVIL USAGE OF MILITARY FIELDS: U. S. Air Force and Navy fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

DIRECTORY OF AIRPORTS AND AIR NAVIGATION RADIO AIDS NOTAMS: Because of space limitation, the Airport Directory and Air Navigation Radio Aids perforce serve as a notam supplement. Notam data revising a previous Directory or ANRA are indicated by prefixed arrows. The only airport or radio data (other than temporary conditions of short duration) carried in the Notices to Airmen Section are facility coordinates, post-deadline data, or data impossible to incorporate in the two above tabulations.

FLYING OVER FOREIGN TERRITORY: All aircraft operators are urgently cautioned that no over-flights of foreign territory should be made without authorization from the foreign government concerned, and then only in accordance with authorized procedures.

Safety of crews, passengers and aircraft require that every precaution be taken to follow such procedures, particularly with Iron Curtain countries.

DIRECT COMMUNICATIONS WITH AIR ROUTE TRAFFIC CONTROL CENTERS: The CAA has inaugurated a procedure whereby pilots operating on IFR flight plans may have direct communication with air route traffic controllers at certain control centers. VHF on a simplex basis (call-up and reply on the same frequency) is used. This enables the controller to issue traffic clearances and receive indications of compliance therewith in such a manner that all air traffic is expedited. The center will guard the assigned frequency. However, each specific aircraft, with which the center desires to establish direct communication for control purposes, will receive a clearance through the appropriate CAA, AACS or Air Carrier Communications Station, indicating the time or place the controller desires to communicate directly with the pilot.

The following locations at which this direct communications procedure is available are also listed in the Air Navigation Radio Aids Section of the Airman's Guide. Each one is listed alphabetically following the tower listing. When additional locations establish this procedure they will be similarly listed:

✓VHF OMNITEST SIGNAL FACILITIES: Experimental VHF omnitest signal facilities have been installed at the New York (LaGuardia 112.0 mc), Chicago (Midway 112.0 mc), and Kansas City (Municipal 113.0 mc) airports. These facilities cannot be used for navigational purposes but permit checking of aircraft navigational VOR receivers during a ramp test or while in flight near the airport. Voice communication is not available on the test signal frequency. The facility radiates a 0° course in all directions with a power output of about 10 watts. The identification consists of continuous dots without voice. Each facility is continuously monitored and will shut down automatically if the 0° course varies by more than one degree from normal or in case the identification fails. Flight checks indicate that the omnitest signal is usable to a distance of about ten miles at minimum instrument altitude although regions of weak and unreliable signal may be encountered at shorter distances. The omnitest signal may be regarded as dependable when there is no flag alarm showing or where no flag alarm is incorporated in the aircraft unit and the identification is received free from interference and noise. Comment from airmen will be appreciated. Please forward same to: Civil Aeronautics Administration, Washington 25, D. C., Attention: W-380.

RECEIVER OMNITEST PROCEDURE - Receivers with omni-Bearing Selectors (OBS)

Tune in omnitest frequency. The "To-From" indicator should read "To" or "From" and the alarm flag, if one is used, should disappear.

Set OBS in vicinity of 0° to center "Deviation" indicator. The "To-From" indicator should read "From" and the difference between 0° and the actual OBS reading indicates the amount of calibration error in the airborne equipment.

Set OBS in vicinity of 180° to again center "Deviation" indicator. The "To-From" indicator should read "To" and the difference between 180° and the actual OBS reading indicates the amount of calibration error in the airborne equipment.

With the "Deviation" indicator centered in the 180° position rotate OBS clockwise until "Deviation" indicator reads full scale or five dots to left. Note OBS reading. Next rotate OBS counterclockwise until "Deviation" indicator reads full scale or five dots to right. Note OBS reading. The difference between the two OBS readings is a measure of receiver course sensitivity.

If instrumentation includes a radio magnetic indicator (RMI) the pointer on this instrument connected to the receiver being checked should be observed. This pointer should indicate 180° ± 1 degree regardless of the setting of the OBS.

AUTOMATIC INDICATING RECEIVERS: Automatic indicating receivers do not have an Omni-Bearing Selector or a "To-From" indicator and have no ambiguity. The only course that can be checked is the one indicated when the equipment is receiving the 0° (magnetic

north) radial from the station, which is automatically indicated when the receiver is turned on and tuned to the correct signal frequency. Either 0° or 180° will be indicated depending on the sensing designed into the particular receiving equipment (as described in the instruction book for that equipment).

√INSTRUMENT APPROACH PROCEDURES: The standard instrument approach procedures for the following airports have been CANCELLED: Automatic Direction Finding: Ardmore, Okla., Ardmore Arpt., effective March 23, 1951. Instrument Landing System: Amarillo, Texas, Armarillo Air Terminal, effective March 30, 1951.

√FLIGHT ADVISORY AREA BOUNDARY AMENDMENTS: Effective immediately the the Great Falls - Salt Lake City flight advisory area boundary is relocated as follows: from 25 mi S of Dillon, Mont. on Amber 2 to a point 50 mi SE of Billings, Mont. on Amber 3.

√CORRECTION TO AIRMAN'S GUIDE: Correct Airman's Guide, Vol. 6, No. 2, dated April 10, 1951, page 92, paragraph 9, control area extension (La Crosse, Wis.) by changing Green Civil Airway No. 3 to read Green Civil Airway No. 2.
